**Abu Dhabi National Insurance Company P.J.S.C.**  
**Board of Directors' Statement**  
**For the six-month period ended 30 June 2023**

The Board of Directors is pleased to report Abu Dhabi National Insurance Company's financial results for the six months ended 30 June 2023.

ADNIC has had a strong start to the year with an Insurance Revenue of AED 2.14 billion. As we continue to successfully unwind our dependence on heavily reinsured corporate programs our underwriting profitability continues to be robust with a combined ratio of 87.60% and a net insurance service profit of AED 178.1 million. The tailwind of higher interest rates and modified asset allocation positively impacted investment income. Total investment income for the period was AED 110.8 million. As a result of strong underwriting and investment performance, ADNIC has delivered a net profit of AED 204.4 million (15.46% increase versus prior year) and an increase in earnings per share from AED 0.31 to AED 0.36.

We continue to invest in technology and operational efficiency across our entire value chain. These investments in key areas will enable more cost-effective and faster policy servicing and have a positive impact on our operations and facilitate sustainable growth. By embracing cutting-edge technology and innovative solutions, we aim to enhance our customers' experiences, increase efficiency, and remain adapted to market dynamics.

Sustainability is deeply ingrained in our core values, shaping the foundation of our business approach. We are currently revamping our strategy to steer the company towards a new era of sustainable practices that will benefit both our customers and the communities we serve substantially. In the past quarter, we have continued to work together with major organisations, including the Reach Campaign and Emirates Nature-WWF, which is a testament to our wide array of activities from preserving the environment to helping communities abroad fight diseases.

We are grateful for the guidance received from the UAE's leadership and extend our sincere gratitude to His Highness Sheikh Mohamed Bin Zayed Al Nahyan, President of the UAE and His Highness Sheikh Mohammed Bin Rashid Al Maktoum, UAE Vice President and Prime Minister, and Ruler of Dubai, and His Highness Sheikh Khaled bin Mohamed bin Zayed Al Nahyan, Crown Prince of Abu Dhabi.

On behalf of the Board of Directors, we would like to thank our esteemed partners and shareholders for their continuous support, enabling ADNIC to solidify its position as the UAE's reliable insurer. We want to also extend my thanks to our dedicated employees, whose hard work and commitment are instrumental to our success. Last but not least, we extend our deepest appreciation to our customers, who continuously place their trust in us

---

**Sheikh Mohamed Bin Saif Al-Nahyan**  
**Chairman of the Board**

**Abu Dhabi National Insurance Company P.J.S.C.**  
**Chief Executive Officer's Statement**  
**For the six-month period ended 30 June 2023**

I am very pleased to provide the following status update on ADNIC's operating performance for the six-month period ended 30 June 2023.

As mentioned in our previous quarterly update, we continue to systematically leverage our core competencies of customer centricity, operational excellence, available capital base, solid solvency ratio, core underwriting excellence, robust enterprise risk management framework and market leading reinsurance arrangements. In addition, we continue to invest heavily in the development and engagement of our workforce with a constantly increasing number of available professional development courses and initiatives. We were the first amongst our peers to successfully implement IFRS 17 Insurance Contracts (IFRS 17) as of 1 January 2023. This has led to substantial transformations in the accounting of insurance and reinsurance contracts and we remain well ahead of the curve in understanding the long term business implications whilst we continue to graduate our operational rhythm towards this new order.

As we continue to navigate the evolving economic landscape in the second half of the year, our focus remains on continuing to invest in our core business lines and digital capabilities. By doing so, we are positioning ourselves optimally to capitalize on future growth opportunities and provide our customers with the best possible service.

Beyond our core business objectives, ADNIC continues to actively engage in community initiatives and support causes that are close to our hearts, both at home and abroad. In the past month alone, we have partnered with the Reach Campaign to support its efforts to combat neglected tropical diseases (NTDs), and with Emirates Nature-WWF for the third consecutive year to support their mission to build a future where people and nature can thrive.

**Key Financial Highlights (prior year numbers are reinstated in line with IFRS 17 standard requirements)**

***Total Insurance revenue***

For the six-month period ended 30 June 2023, ADNIC's total insurance revenue stood at AED 2.14 billion, compared to AED 2.24 billion for the same period in 2022. We continue to successfully reduce our relative exposure to highly reinsured corporate insurance programs and focus instead on maintaining and developing portfolios with strong underwriting income contribution potential.

***Net insurance service result***

For the six-month period ended 30 June 2023, ADNIC's net insurance service result stood at AED 178.1 million, against AED 196.4 million for the same period in 2022. This is aligned with the current stage of our financial planning and financial reporting transition necessary due to the new IFRS17 standard requirements.

***Net Income from investment***

ADNIC's net income from investment increased by 78.57% to AED 110.8 million for the six-month period ended 30 June 2023, compared to AED 62.0 million for the same period in 2022. This growth can be attributed to several key factors, including higher interest and coupon incomes, due to strategic changes made in asset allocation in the prior year, as well as mark-to-mark market gains.

***Other operating expenses***

Other operating expenses for the six-month period ended 30 June 2023 stood at AED 81.5 million, compared to AED 77.7 million for the same period in 2022. This reflects our commitment to the investments required to deliver our digital transformation strategic initiatives.

***Profit for the period***

The consolidated outcome of all of the above major financial streams for the six-month period ended 30 June 2023, is a Profit for the period increase of 15.46% to AED 204.4 million, compared to AED 177.0 million for the same period in 2022. We remain confident and committed that this strong trend will continue for the remainder of the year.

I would like to thank our Board of Directors for their guidance, mentorship and unrivaled support, and our management team and overall workforce for their hard work, discipline and dedication which is the driving force behind our continuous achievements and success.

---

# Independent Auditors' Report on Review of the Condensed Consolidated Interim Financial Information

## To the Shareholders of Abu Dhabi National Insurance Company PJSC

### Introduction

We have reviewed the accompanying 30 June 2023 condensed consolidated interim financial information of Abu Dhabi National Insurance Company PJSC (the "Company") and its subsidiary (the "Group"), which comprises:

- the condensed consolidated interim statement of financial position as at 30 June 2023;
- the condensed consolidated interim statements of profit or loss for the three-month and six-month periods ended 30 June 2023;
- the condensed consolidated interim statements of profit or loss and other comprehensive income for the three-month and six-month periods ended 30 June 2023;
- the condensed consolidated interim statement of changes in shareholders' equity for the six-month period ended 30 June 2023;
- the condensed consolidated interim statement of cash flows for the six-month period ended 30 June 2023; and
- notes to the condensed consolidated interim financial information.

Management is responsible for the preparation and presentation of this condensed consolidated interim financial information in accordance with IAS 34, 'Interim Financial Reporting'. Our responsibility is to express a conclusion on this condensed consolidated interim financial information based on our review.

### Scope of Review

We conducted our review in accordance with the International Standard on Review Engagements 2410, "Review of Interim Financial Information Performed by the Independent Auditor of the Entity". A review of condensed consolidated interim financial information consists of making inquiries, primarily of persons responsible for financial and accounting matters, and applying analytical and other review procedures. A review is substantially less in scope than an audit conducted in accordance with International Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion.

**Abu Dhabi National Insurance Company PJSC**  
*Independent Auditors' Report on Review of the  
Condensed Consolidated Interim Financial Information  
30 June 2023*

**Conclusion**

Based on our review, nothing has come to our attention that causes us to believe that the accompanying 30 June 2023 condensed consolidated interim financial information is not prepared, in all material respects, in accordance with IAS 34, 'Interim Financial Reporting'.

The Company’s principal activity is the transaction of insurance and reinsurance business of all classes and is registered with the Insurance Companies Register of Central Bank of UAE under registration No. 001. The registered office of the Company is located at Khalifa Street, ADNIC Building, P. O. Box 839, Abu Dhabi, UAE.

### 2 Basis of preparation

#### (a) Basis of consolidation

The condensed consolidated interim financial information comprises the financial results of the Company and those of its following subsidiary (together “the Group”):

Subsidiary	Principal activity	Country of incorporation	Ownership
ADNIC International LTD	*Other activities auxiliary to insurance	United Kingdom	100%

\* The Company incorporated a wholly owned subsidiary on 3 July 2017 named ADNIC International LTD to operate as a representative office of the Company in London, England.

The subsidiary is fully consolidated from the date on which control is transferred to the Company. Control is achieved when the Group is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee.

The financial statements of the subsidiary are prepared for the same reporting year / period as the Group, using consistent accounting policies.

#### (b) Basis of accounting

As explained in note 3, the Group has adopted IFRS 17 Insurance Contracts, including any consequential amendments to other standards, with a date of initial application of 1 January 2023. The requirements of IFRS 17 have resulted in significant changes to the accounting for insurance and reinsurance contracts. As a result, the Group has restated certain comparative amounts in the opening balances.

#### (c) Statement of compliance

This condensed consolidated interim financial information has been prepared in accordance with International Accounting Standard (“IAS”) 34, *Interim Financial Reporting*. Accordingly, this condensed consolidated interim financial information does not include all of the information required for a complete set of consolidated financial statements, and should be read in conjunction with the consolidated financial statements of the Group as at and for the year ended 31 December 2022 except for changes in significant accounting policy as provided in note 5, which have been prepared in accordance with International Financial Reporting Standards (“IFRS”). The results for the six-month period ended 30 June 2023 are not necessarily indicative of the results for the year ending 31 December 2023.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 2 Basis of preparation *(continued)*

#### *(d) Basis of measurement*

The condensed consolidated interim financial information has been prepared under the historical cost convention except for investment properties, financial assets at fair value through profit or loss and financial assets at fair value through other comprehensive income which are carried at fair values.

#### *(e) Functional and reporting currency*

This condensed consolidated interim financial information is presented in United Arab Emirates Dirhams (“AED”), which is the Group’s functional currency. Except as indicated, financial information presented in AED has been rounded to the nearest thousand.

#### *(f) Use of judgements and estimates*

In preparing this condensed consolidated interim financial information, management has made judgements and estimates that affect the application of accounting policies and the reported amounts of assets and liabilities, income and expense. Actual results may differ from these estimates.

Estimates and underlying assumption are reviewed on an ongoing basis. Revision to accounting estimates are recognised in the period in which the estimate is revised and in any future period affected.

#### *(i) Estimation uncertainty*

The key assumptions concerning the future and other key sources of estimation uncertainty at the reporting date, that have a significant risk of causing a material adjustment to the carrying amounts of assets and liabilities within the next financial year are discussed below:

##### *Discount rates*

Under the bottom-up approach, the discount rate is determined as the risk-free yield, adjusted for differences in liquidity characteristics between the financial assets used to derive the risk-free yield and the relevant liability cash flows (known as an ‘illiquidity premium’). Management uses judgement to assess liquidity characteristics of the liability cash flows.

##### *Estimates of future cash flows to fulfil insurance contracts*

Included in the measurement of each group of contracts within the scope of IFRS 17, are all future cash flows within the boundary of each group of contracts. The estimates of these future cash flows are based on probability-weighted expected future cash flows. The Group estimates which cash flows are expected and the probability that they will occur as at the measurement date. The Group’s estimate of future cash flows is the mean of a range of scenarios that reflect the full range of possible outcomes. Each scenario specifies the amount, timing and probability of cash flows. The probability-weighted average of the future cash flows is calculated using a deterministic scenario representing the probability-weighted mean of a range of scenarios.

Where estimates of expenses-related cash flows are determined at the portfolio level or higher, they are allocated to groups of contracts using relevant proxies.

Judgement is involved in assessing the most appropriate technique to estimate insurance liabilities for the claims incurred. Such estimates are made using a range of standard actuarial claim projection techniques, based on empirical data and current assumptions and actual results may differ from management’s estimates resulting in future changes in estimated liabilities.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 2 Basis of preparation (continued)

#### (f) Use of estimates and judgement (continued)

##### (i) Estimation uncertainty (continued)

###### *Methods used to measure the risk adjustment for non-financial risk*

The risk adjustment for non-financial risk is the compensation that is required for bearing the uncertainty about the amount and timing of cash flows that arises from non-financial risk as the insurance contract is fulfilled. Because the risk adjustment represents compensation for uncertainty, estimates are made on the degree of diversification benefits and expected favourable and unfavourable outcomes in a way that reflects the Group's degree of risk aversion.

Judgement is involved in assessing the most appropriate method to estimate the risk adjustment for non-financial risk and also to choose the most appropriate confidence level to which the risk adjustment for non-financial risk should correspond.

###### *Measurement of the expected credit losses allowance*

Assessment of whether credit risk on the financial asset has increased significantly since initial recognition and incorporation of forward-looking information in the measurement of Expected Credit Losses ("ECL") requires the use of complex models and significant assumptions about future economic conditions and credit behaviour. The Group considers a financial asset to be in default when the borrower is unlikely to pay its credit obligations to the Group in full, without recourse by the Group to actions such as realising security (if any is held).

A number of factors are also considered in applying the accounting requirements for measuring ECL, such as:

- determining the criteria for significant increase in credit risk;
- determining the criteria and definition of default;
- choosing appropriate models and assumptions for the measurement of ECL; and
- establishing groups of similar financial assets for the purposes of measuring ECL.

When determining whether the credit risk of a financial asset has increased significantly since initial recognition and when estimating ECLs, the Group considers reasonable and supportable information that is relevant and available without undue cost or effort. This includes both quantitative and qualitative information and analysis, based on the Group's historical experience and informed credit assessment and including forward-looking information.

###### *Fair value of investment properties*

The fair value of investment properties is determined by independent real estate valuation consultants based on discounted cash flow (DCF) and investment method of valuation. The investment method analyses potential rental income from the property and deducts the expenses incurred in the operation of the asset. The net rental income is then capitalised at market standards to arrive at fair value. The DCF method calculates the present value of net cashflows.

Such valuations are based on certain assumptions, which are subject to uncertainty and might materially differ from the actual values realised. The change in fair value recognised in the condensed consolidated statement of profit or loss for the six-month period ended 30 June 2023 is AED Nil (31 December 2022: AED 7,548 thousand).

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 2 Basis of preparation *(continued)*

#### *(f) Use of estimates and judgement (continued)*

##### *(ii) Judgements*

In the process of applying the Group's accounting policies, management has made the following judgements, apart from those involving estimations, which have the most significant effect in the amounts recognised in the condensed consolidated interim financial information.

##### *Classification of investments*

Management decides on acquisition of an investment whether it should be classified as investments carried at fair value or amortised cost on the basis of both:

- (a) its business model for managing the financial assets; and
- (b) the contractual cash flow characteristics of the financial asset.

For equity investments carried at fair value, management decides whether it should be classified as financial assets carried at fair value through other comprehensive income (FVOCI) or fair value through profit or loss (FVTPL).

Investments in equity instruments are classified and measured at FVTPL except if the equity investment is not held for trading and is designated by the Group at FVOCI.

Further, even if the asset meets the amortised cost criteria the Group may choose at initial recognition to designate the financial asset as at FVTPL if doing so eliminates or significantly reduces an accounting mismatch.

For debt securities acquired to match its business model of development of the line of business, the Group classifies these investments as financial assets at fair value through other comprehensive income.

##### *Fair value of financial instruments*

Where the fair value of financial assets and financial liabilities recorded in the condensed consolidated statement of financial position cannot be derived from active markets, their fair values are based on Net Asset Values (NAV) calculated by the respective fund managers. For investments in unquoted equity securities, the fair values are based on internal valuation techniques such as discounted cash flows and comparable companies' multiples.

##### *Definition and classification*

Judgement is required in order to determine whether contracts are within the scope of IFRS 17 and, for contracts determined to be within the scope of IFRS 17, which measurement model is applicable:

- Whether a contract issued accepts significant insurance risk and, similarly, whether a reinsurance contract held transfers significant insurance risk;
- Whether a contract issued that does not transfer significant insurance risk meets the definition of an investment contract with discretionary participation features;
- Whether contracts that were determined to be within the scope of IFRS 17 meet the definition of an insurance contract with direct participation features, particularly:
  - whether the pool of underlying items is clearly identified;
  - whether amounts that an entity expects to pay to the policyholders constitute a substantial share of the fair value returns on the underlying items; and
  - whether the Group expects the proportion of any change in the amounts to be paid to the policyholders that vary with the change in fair value of the underlying items to be substantial.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 2 Basis of preparation *(continued)*

#### *(f) Use of estimates and judgement (continued)*

##### *(ii) Judgements (continued)*

###### *Definition and classification (continued)*

- For insurance contracts with a coverage period of more than one year and for which the entity applies the Premium Allocation Approach (PAA), the eligibility assessment as required by paragraphs 53(a), 54, 69(a) and 70 of IFRS 17 might involve significant judgement.

Judgement is involved in combination of insurance contracts and separation of distinct components:

- Combination of insurance contracts – whether the contract with the same or related counterparty achieve or are designed to achieve, an overall commercial effect and require combination;
- Separation – whether components in paragraphs 11–12 of IFRS 17 are distinct (that is, they meet the separation criteria); and
- Separation of contracts with multiple insurance coverage – whether there are facts and circumstances where the legal form of an insurance contract does not reflect the substance and separation is required.

###### *Unit of account*

Judgement is involved in the identification of portfolios of contracts, as required by paragraph 14 of IFRS 17 (that is, having similar risks and being managed together).

Aggregation of insurance contracts issued on initial recognition into groups of onerous contracts, groups of contracts with no significant possibility of becoming onerous, and groups of other contracts. Similar grouping assessment is required for reinsurance contracts held. Areas of potential judgements include:

- paragraph 17 of IFRS 17 – the determination of contract sets within portfolios and whether the Group has reasonable and supportable information to conclude that all contracts within a set would fall into the same group, as required by paragraph 16 of IFRS 17; and
- paragraphs 18 and 19 of IFRS 17 – judgements might be applied on initial recognition to distinguish between non-onerous contracts (those having no significant possibility of becoming onerous) and other contracts.

For contracts not measured under the PAA, the assessment of the likelihood of adverse changes in assumptions that might result in contracts becoming onerous is an area of potential judgement.

For insurance contracts issued which are measured under the PAA, management judgement might be required to assess whether facts and circumstances indicate that a group of contracts has become onerous. Further, judgement is required to assess whether facts and circumstances indicate that any changes in the onerous group's profitability and whether any loss component remeasurement is required.

The determination of whether laws or regulations constrain the Group's practical ability to set a different price or level of benefits for policyholders with different risk profiles, so that the Group might include such contracts in the same group, disregarding the aggregation requirements set in paragraphs 14–19 of IFRS 17, is an area of judgement.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 2 Basis of preparation (continued)

#### (f) Use of estimates and judgement (continued)

##### (ii) Judgements (continued)

###### *Recognition and derecognition*

When contracts are modified, judgement might be applied to establish if the modification meets the criteria for derecognition. In particular, after the modification, judgement is applied to determine whether:

- significant insurance risk still exists;
- there are elements that are to be distinct from the contract;
- contract boundaries have changed;
- the contract would have to be included in a different group, subject to aggregation requirements; and
- the contract no longer meets the requirements of the measurement model.

###### *Fulfilment cash flows*

The concept of a contract boundary is used to determine which future cash flows should be considered in the measurement of a contract within the scope of IFRS 17.

Judgements might be involved to determine when the Group is capable of repricing the entire contract to reflect the reassessed risks, when policyholders are obliged to pay premiums, and when premiums reflect risks beyond the coverage period.

Where features such as options and guarantees are included in the insurance contracts, judgement might be required to assess the entity's practical ability to reprice the entire contract to determine if related cash flows are within the contract boundary.

An entity can use judgement to determine which cash flows within the boundary of insurance contracts are those that relate directly to the fulfilment of the contracts.

The determination of what constitutes an investment component might be an area of judgement significantly affecting amounts of recognised insurance revenue and insurance service expenses, because investment components should be excluded from those.

###### *Revenue recognition*

Insurance revenue and reinsurance expenses – methods and assumptions used in the determination of the contractual service margin (CSM) to be recognised in condensed interim statement of profit or loss for the insurance contract services provided or received in the period.

Areas of potential judgement are:

- the determination of the expected coverage period over which the CSM is allocated into condensed interim statement of profit or loss for the services provided or received, that is, the determination of expected insurance coverage period;
- the determination of the coverage units provided or received in the current period and expected to be provided in future periods, including the determination of the relative weighting of the benefits provided by insurance coverage; and
- factoring in the time value of money when determining the equal allocation of the CSM to the coverage units provided or received.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 2 Basis of preparation (continued)

#### (f) Use of estimates and judgement (continued)

##### (ii) Judgements (continued)

###### *Revenue recognition*

An entity might apply judgement to determine whether the treatment of certain consequential insurance risks within Liability For Remaining Coverage (LRC) or Liability For Incurred Claims (LIC) reflects the most useful information about the insurance services provided by the entity to the policyholder.

For contracts measured under the General Measurement Model (GMM) in which the Group has discretion over the cash flows to be paid to the policyholders, judgement might be involved in the determination of what the Group considers its commitment on initial recognition of such contracts. Further, judgement might be required to distinguish subsequent changes in the fulfilment cash flows (FCF) resulting from changes in the Group's commitment and those resulting from changes in assumptions that relate to the financial risk on that commitment.

### 3 New and amended standards and interpretations

#### New currently effective requirements

##### *IFRS 17 Insurance Contracts*

The Group has initially applied IFRS 17 Insurance Contracts (IFRS 17), which replaces IFRS 4 Insurance Contracts (IFRS 4), including any consequential amendments to other standards, from 1 January 2023. These standards have brought significant changes to the accounting for insurance and reinsurance contracts and financial instruments. As a result, the Group has restated certain comparative amounts for the prior year.

The overall objective of IFRS 17 is to provide an accounting model for insurance contracts that is more useful and consistent for insurers. In contrast to the requirements in IFRS 4, which are largely based on grandfathering previous local accounting policies, IFRS 17 provides a comprehensive model for insurance contracts, covering all relevant accounting aspects. The application of the principles set out under IFRS 17 is covered in note 5.

##### *Other new standards or amendments*

The Group has initially adopted Interest Rate Benchmark Reform (Amendments to IFRS 9, IAS 39 and IFRS 7) from 1 January 2023, however, these amendments do not have any material impact on the Group's condensed consolidated interim financial information. The following are other new standards or amendments which do not have a significant impact on the Group's condensed consolidated interim financial information, when effective:

<i>Other new standards or amendments</i>	<i>Effective date</i>
Amendments to IAS 1 and IFRS Practice Statement 2 – Disclosure of Accounting Policies	1 January 2023
Amendments to IAS 8 – Definition of Accounting Estimate	1 January 2023
Amendments to IAS 12 – Deferred Tax related to Assets and Liabilities arising from a Single Transaction	1 January 2023

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 3 New and amended standards and interpretations *(continued)*

#### *Forthcoming requirements*

A number of new standards are effective for annual periods beginning after 1 January 2023 and earlier application is permitted; however, the Group has not early adopted any of the forthcoming new or amended standards in preparing this condensed consolidated interim financial information.

<i>New standards or amendments</i>	<i>Effective date</i>
Amendments to IAS 1 – Classification of Liabilities as Current or Non-current	1 January 2024
Amendments to IAS 1 – Non-current liabilities with covenants	1 January 2024
Amendments to IFRS 16 – Lease Liability in a Sale and Leaseback	1 January 2024
Amendments to IFRS 10 and IAS 28 – Sale or Construction of Assets between an Investor and its Associate or Joint Venture	N/A*

\*Available for optional adoption / effective date deferred indefinitely.

### 4 Significant accounting policies

The accounting policies applied by the Group in this condensed consolidated interim financial information are the same as those applied by the Group in its consolidated financial statements as at and for the year ended 31 December 2022, except for insurance contracts where IFRS 17 is applied.

### 5 Changes in significant accounting policies

#### **Insurance contracts**

##### *Definition and classification*

The Group issues contracts that transfer either insurance risk or both insurance and financial risks. The Group does not issue contracts that transfer only financial risks.

Insurance contracts are contracts under which the Group accepts significant insurance risk from a policyholder by agreeing to compensate the policyholder if a specified uncertain future event adversely affects the policyholder. In making this assessment, all substantive rights and obligations, including those arising from law or regulation, are considered on a contract-by-contract basis. The Group uses judgement to assess whether a contract transfers insurance risk (that is, if there is a scenario with commercial substance in which the Group has the possibility of a loss on a present value basis) and whether the accepted insurance risk is significant.

In the normal course of business, the Group uses reinsurance to mitigate its risk exposures. A reinsurance contract transfers significant risk if it transfers substantially all of the insurance risk resulting from the insured portion of the underlying insurance contracts, even if it does not expose the reinsurer to the possibility of a significant loss. All references to insurance contracts in the condensed consolidated interim financial information apply to insurance contracts issued or acquired and reinsurance contracts held unless specifically stated otherwise.

The Group does not write any investment contracts with discretionary participation features or insurance contracts with direct participation features.

##### *Changes to classification and measurement*

For the Group, IFRS 17 has not resulted in a material change in the classification of insurance contracts relative to IFRS 4.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Changes to classification and measurement (continued)*

Previously, the Group measured contracts at the line of business level under IFRS 4. IFRS 17 has introduced a new unit of account at which insurance and reinsurance contracts are measured. Contracts are grouped into a unit of account based on the portfolio, cohort and profitability group to which the contract belongs.

IFRS 17 establishes principles for the recognition, measurement, presentation and disclosure of insurance contracts, reinsurance contracts and investment contracts with discretionary participation features. It introduces a model that measures groups of contracts based on the Group's estimates of the present value of future cash flows that are expected to arise as the Group fulfils the contracts, an explicit risk adjustment for non-financial risk and a CSM.

The Group applies the premium allocation approach (PAA) to simplify the measurement of contracts for all groups except for the single premium credit life business which is not eligible for this approach. When measuring liabilities for remaining coverage, the PAA is similar to the Group's previous accounting treatment. However, when measuring liabilities for incurred claims, the Group now discounts the future cash flows (unless they are expected to occur in one year or less from the date on which the claims are incurred) and includes an explicit risk adjustment for non-financial risk.

##### *Changes to preparation and disclosures*

For presentation in the statement of financial position, the line items for insurance and reinsurance contracts issued and reinsurance contracts held have been changed significantly compared with last year. Previously balance sheet items related to insurance and reinsurance contracts were split into the following line items:

- Assets:
  - Insurance balances receivable;
  - Reinsurers' share of unearned premiums reserve;
  - Reinsurers' share of outstanding claims reserve; and
  - Reinsurers' share of claims incurred but not reported reserve.
- Liabilities:
  - Unearned premiums reserve;
  - Outstanding claims reserve;
  - Claims incurred but not reported reserve; and
  - Allocated and unallocated loss adjustment expenses reserve.

Under IFRS 17, the Group aggregates insurance and reinsurance contracts issued and reinsurance contracts held, respectively and presents separately on the balance sheet:

- Portfolios of insurance contracts issued that are assets;
- Portfolios of insurance contracts issued that are liabilities;
- Portfolios of reinsurance contracts held that are assets; and
- Portfolios of reinsurance contracts held that are liabilities.

The portfolios referred to above are those established at initial recognition in accordance with the IFRS 17 requirements.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Changes to preparation and disclosures (continued)*

The line item descriptions in the statement of profit or loss and other comprehensive income have been changed significantly compared with last year. Previously, the Company reported the following line items:

- Gross written premiums;
- Reinsurance share of gross written premiums;
- Net transfer to unearned premiums reserve;
- Commissions earned;
- Commissions incurred;
- Gross claims paid;
- Reinsurance share of claims paid;
- Change in outstanding claims reserve;
- Change in reinsurance share of outstanding claims reserve;
- Net change in incurred but not reported claims reserve;
- Change in allocated and unallocated loss adjustment expenses reserve;
- Other income and expenses related to underwriting activities;
- General and administrative expenses; and
- Charge for expected credit losses of insurance balances receivable.

Instead, IFRS 17 requires separate presentation of:

- Insurance revenue;
- Insurance service expenses;
- Reinsurance expenses;
- Reinsurance income;
- Insurance finance income and expenses; and
- Reinsurance finance income and expenses.

The Company provides disaggregated qualitative and quantitative information about:

- Amounts recognised in its financial statements from insurance contracts; and
- Significant judgements, and changes in those judgements, when applying the standard.

##### *Application of judgement on transition*

The Group has determined that reasonable and supportable information was available for all contracts in force at the transition date. For all contracts that are eligible for the PAA, the Group has concluded that only current and prospective information was required to reflect circumstances at the transition date, which made the full retrospective application practicable. All contracts not measured under the PAA were issued in during the financial year prior to transition and thus there is reasonable and supportable information to use the fully retrospective approach for these contracts.

Accordingly, the Group has: identified, recognised and measured each group of insurance contracts as if IFRS 17 had always applied; derecognised any existing balances that would not exist if IFRS 17 had always applied; and recognised any resulting net difference in equity.

The Group has not recognised any insurance acquisition cash flows assets relating to insurance contracts issued or expected to be issued.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Unit of account*

The Group manages insurance contracts issued by product lines within an operating segment, where each product line includes contracts that are subject to similar risks. All insurance contracts within a product line represent a portfolio of contracts except for some smaller lines which are managed together and have been combined into a single portfolio.

Each portfolio is further disaggregated into groups of contracts that are issued within a calendar year.

Each cohort is further disaggregated into groups of contracts:

- Contracts that are onerous at initial recognition;
- Contracts that at initial recognition have no significant possibility of becoming onerous subsequently; and
- A group of remaining contracts.

This level of granularity determines sets of contracts. Significant judgement is used to determine at what level of granularity the Group has reasonable and supportable information that is sufficient to conclude that all contracts within a set are sufficiently homogeneous and will be allocated to the same group without performing an individual contract assessment.

The Group will assess profitability at the cohort level as these are all deemed to have homogenous profitability. If facts and circumstances indicate that any specific segment / group of contracts within the portfolio is expected to have different profitability characteristics from the rest of the portfolio, then these will be split into a separate profitability group.

For short duration contracts, the Group uses normalised risk adjusted expected total combined ratio to split contracts into the three different groups above. For longer term contracts, the Group calculates a risk adjusted profit margin (the ratio of the CSM to the present value of future premiums) at inception to determine the profitability grouping.

Portfolios of reinsurance contracts held are assessed for aggregation separately from portfolios of insurance contracts issued. The Group has split reinsurance contracts into portfolio based on the product lines which are covered by the reinsurance contract.

Applying the grouping requirements to reinsurance contracts held, the Group aggregates reinsurance contracts held concluded within a cohort into groups of:

- contracts for which there is a net gain at initial recognition, if any;
- contracts for which, at initial recognition, there is no significant possibility of a net gain arising subsequently; and
- remaining contracts in the portfolio, if any.

This level of granularity determines sets of contracts. Significant judgement is used to determine at what level of granularity the Group has reasonable and supportable information that is sufficient to conclude that all reinsurance contracts within a set are sufficiently homogeneous and will be allocated to the same group without performing an individual contract assessment.

For all reinsurance contracts net gain or net loss is assessed at a cohort level as this is the most granular level where profitability is available.

The Group uses the reinsurance combined ratio to allocate contracts to each of the three groups above.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Unit of account (continued)*

Before the Group accounts for an insurance contract based on the guidance in IFRS 17, it analyses whether the contract contains components that should be separated. IFRS 17 distinguishes three categories of components that have to be accounted for separately:

- cash flows relating to embedded derivatives that are required to be separated;
- cash flows relating to distinct investment components; and
- promises to transfer distinct goods or distinct services other than insurance contract services.

The Group applies IFRS 17 to all remaining components of the contract. The Group does not have any contracts that require further separation or combination of insurance contracts.

##### *Recognition and derecognition*

Groups of insurance contracts issued are initially recognised from the earliest of the following:

- the beginning of the coverage period;
- the date when the first payment from the policyholder is due or actually received, if there is no due date; and
- when the Group determines that a group of contracts becomes onerous.

Insurance contracts acquired in a business combination within the scope of IFRS 3 or a portfolio transfer are accounted for as if they were entered into at the date of acquisition or transfer.

Reinsurance contracts held are recognised as follows:

- A group of reinsurance contracts held that provide proportionate coverage is recognised at the later of the beginning of the coverage period of the group and the initial recognition of any underlying insurance contract; and
- All other groups of reinsurance contracts held are recognised from the beginning of the coverage period of the group of reinsurance contracts held; unless the Group entered into the reinsurance contract held at or before the date when an onerous group of underlying contracts is recognised prior to the beginning of the coverage period of the group of reinsurance contracts held, in which case the reinsurance contract held is recognised at the same time as the group of underlying insurance contracts is recognised.

Only contracts that individually meet the recognition criteria by the end of the reporting period are included in the groups. When contracts meet the recognition criteria in the groups after the reporting date, they are added to the groups in the reporting period in which they meet the recognition criteria, subject to the cohort restriction. Composition of the groups is not reassessed in subsequent periods.

When an insurance contract is modified by the Group as a result of an agreement with the counterparties or due to a change in regulations, the Group treats changes in cash flows caused by the modification as changes in estimates of the FCF, unless the conditions for the derecognition of the original contract are met. The Group derecognises the original contract and recognises the modified contract as a new contract if any of the following conditions are present:

- If the modified terms had been included at contract inception and the Group would have concluded that the modified contract is not within the scope of IFRS 17, results in different separable components, results in a different contract boundary or belongs to a different group of contracts;

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Recognition and derecognition (continued)*

- The original contract represents an insurance contract with direct participation features, but the modified contract no longer meets that definition, or vice versa; and
- The original contract was measured under the PAA, but the modification means that the contract no longer meets the eligibility criteria for that approach.

When a contract is derecognised (and not measured under the PAA), the liability is adjusted as follows:

1. The present value of future cash flows and risk adjustment (RA) for the group of contracts is adjusted such that they are equal to zero; and
2. The CSM or LC is adjusted as follows:
  - a. if the derecognition is not as a result of a transfer to a third party or a modification: the full change in the FCFs is made to the present value of future cash flows and risk adjustment (RA) for the group of contracts;
  - b. If the contract is transferred to a third party: the full change in the FCFs is made to the present value of future cash flows and risk adjustment (RA) for the group of contracts less the premium charged by the third party; and
  - c. If the contract is derecognised due to a modification: the full change in the FCFs is made to the present value of future cash flows and risk adjustment (RA) for the group of contracts less the premium the Group would have charged had it entered into a contract with equivalent terms as the new contract at the date of the contract modification, less any additional premium charged for the modification. When recognising the new contract in this case, the Group assumes such a hypothetical premium was actually received.

The number of coverage units for the expected remaining coverage will be reduced by the number of coverage units that the contract derecognised represented.

When an insurance contract accounted for under the PAA is derecognised, adjustments to remove related rights and obligations to account for the effect of the derecognition result in the following amounts being charged immediately to condensed consolidated interim statement of profit or loss:

- If the contract is extinguished, any net difference between the derecognised part of the LRC of the original contract and any other cash flows arising from extinguishment; and
- If the contract is transferred to a third party, any net difference between the derecognised part of the LRC of the original contract and the premium charged by the third party

If the original contract is modified resulting in its derecognition, any net difference between the derecognised part of the LRC and the hypothetical premium that the entity would have charged if it had entered into a contract with equivalent terms, is recognised as the new contract at the date of the contract modification less any additional premium charged for the modification.

##### *Measurement approach*

The Group elects to measure all insurance contracts under the PAA where eligible to do so. Currently all insurance contracts are eligible and thus measured under the PAA except for the single premium credit life business which is measured under the GMM.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### **Insurance contracts** *(continued)*

##### **Measurement approach** *(continued)*

Contracts written by the Group that have a coverage period of one year or less are automatically eligible for the PAA. The Group does write some contracts that have a coverage period exceeding one year and which were not automatically eligible. These are the Property, Motor (non-Fleet), Casualty and Engineering portfolios. For all the groups of contracts within the portfolio, the LRC measured under the PAA and the GMM were projected over the lifetime of the contracts, considering different reasonable scenarios, to determine if the differences were significant. The Group has found that for all these contracts the PAA provided a reasonable approximation of the GMM and were thus eligible for measurement under the PAA.

The Group elects to measure all reinsurance contracts under the PAA where eligible to do so. Currently all reinsurance contracts are eligible (and thus measured under the PAA) except for the single premium credit life reinsurance portfolio.

##### **Accounting approach**

ADNIC has elected to determine cumulative results for each interim reporting period, and estimates made by the Group in previous interim financial statements will not be considered when applying IFRS 17 in subsequent interim periods or in the annual financial statements.

##### **Measurement of the FCF**

The FCF are the current estimates of the future cash flows within the contract boundary of a group of contracts that the Group expects to collect from premiums and pay out for claims, benefits and expenses, adjusted to reflect the timing and the uncertainty of those amounts.

The estimates of future cash flows:

- are based on a probability-weighted mean of the full range of possible outcomes;
- are determined from the perspective of the Group, provided that the estimates are consistent with observable market prices for market variables; and
- reflect conditions existing at the measurement date.

The Group has used consistent assumptions to measure the estimates of the present value of the future cash flows for the group of reinsurance contracts held and the estimates of the present value of the future cash flows for the group(s) of underlying insurance contracts.

The Group measures the estimates of the present value of the future cash flows for the group of reinsurance contracts held and includes the effect of any risk of non-performance by the issuer of the reinsurance contract. In addition, the Group includes the effects of collateral and losses from the disputes while estimating the present value of the future cash flows for the group of reinsurance contracts held. Accordingly, the respective line 'changes in the risk of non-performance of the issuer of reinsurance contracts held' is included in the reinsurance contracts assets and liabilities reconciliation.

An explicit risk adjustment for non-financial risk is estimated separately from the other estimates. For contracts measured under the PAA, unless the contracts are onerous, the explicit risk adjustment for non-financial risk is only estimated for the measurement of the LIC.

For reinsurance contracts held, the risk adjustment for non-financial risk represents the amount of risk being transferred by the Group to the reinsurer.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Contract boundaries*

The Group uses the concept of contract boundary to determine what cash flows should be considered in the measurement of groups of insurance contracts. Cash flows are within the boundary of an insurance contract if they arise from the rights and obligations that exist during the period in which the policyholder is obligated to pay premiums or the Group has a substantive obligation to provide the policyholder with insurance contract services. A substantive obligation ends when:

- a. the Group has the practical ability to reprice the risks of the particular policyholder or change the level of benefits so that the price fully reflects those risks; or
- b. both of the following criteria are satisfied:
  - i) the Group has the practical ability to reprice the contract or a portfolio of contracts so that the price fully reflects the reassessed risk of that portfolio;
  - ii) the pricing of premiums up to the date when risks are reassessed does not reflect the risks related to periods; and
  - iii) beyond the reassessment date.

In assessing the practical ability to reprice, risks transferred from the policyholder to the Group, such as insurance risk and financial risk, are considered; other risks, such as lapse or surrender and expense risk, are not included.

Cash flows outside the insurance contracts boundary relate to future insurance contracts and are recognised when those contracts meet the recognition criteria.

For groups of reinsurance contracts held, cash flows are within the contract boundary if they arise from substantive rights and obligations of the Group that exist during the reporting period in which the Group is compelled to pay amounts to the reinsurer or in which the Group has a substantive right to receive insurance contract services from the reinsurer.

The contract boundary of the treaty business of the Group which is written on a risk attaching basis includes the reinsurer's share of all the cash flows of all contracts that attach during the term of the treaty. Treaty business written on a loss occurring basis includes the reinsurer's share of all the cash flows that are incurred within the treaty term. Reinsurance contracts written on a facultative business include the reinsurer's share of all the cash flows within the contract boundary of the underlying contract.

##### *Measurement of expenses*

The Group had defined acquisition expenses as the costs of selling, underwriting and starting issuing a group of insurance contracts as per IFRS 17 requirements. The Group had defined acquisition costs as attributable to a contract (or group of contracts) if the cost is incurred to acquire a specific contract or group of contracts (as opposed to new business in general).

The Group has defined all other expenses as maintenance expenses. The Group has defined maintenance costs as attributable if they could not have been avoided if the contract had not been entered into. Where this is unclear, the Group has determined that maintenance costs are attributable if that expense would continue in run-off.

The Group has separated the outwards reinsurance costs from other expenses using a systematic allocation. The Group defines such expenses as attributable to the reinsurance contracts in line with the principles for direct contracts.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### **Insurance contracts** *(continued)*

##### **Measurement of expenses** *(continued)*

Cash flows that are not directly attributable to a portfolio of insurance contracts, such as some product development and training costs, are recognised in other operating expenses as incurred.

The Group performs regular expense studies and uses judgement to determine the extent to which fixed and variable overheads are directly attributable to fulfilling insurance and reinsurance contracts.

Where estimates of expenses-related cash flows are determined at the portfolio level or higher, they are allocated to groups of contracts on a systematic basis. The Group allocates these using relevant proxies. Similar methods are consistently applied to allocate expenses of a similar nature.

The Group does not pay (or recognise a liability, applying a standard other than IFRS 17) directly attributable acquisition costs before a group of insurance contracts is recognised. As such, no pre-recognition acquisition costs assets have been established.

##### **Initial and subsequent measurement – group of contracts measured under the PAA**

For insurance contracts issued measured under the PAA, on initial recognition, the Group measures the LRC at the amount of premiums received, less any acquisition cash flows paid. Insurance acquisition cash flows allocated to a group are deferred and recognised over the coverage period of contracts in a group.

For insurance contracts issued, at each of the subsequent reporting dates, the LRC is:

- Increased for premiums received in the period;
- Decreased for insurance acquisition cash flows paid in the period;
- Decreased for the amounts of expected premium receipts recognised as insurance revenue for the services provided in the period; and
- Increased for the amortisation of insurance acquisition cash flows in the period recognised as insurance service expenses.

The Group does not adjust the LRC for insurance contracts issued for the effect of the time value of money, because insurance premiums are due within a year of the coverage provided associated with each premium.

For groups of insurance contracts measured under the PAA, the Group recognises insurance revenue based on the passage of time over the coverage period of a group of contracts with the exception of Engineering (all risk) and Construction (all risk) contracts where revenue is recognised using an increasing risk pattern and Marine Cargo where it is assumed that 25% of premium is unearned at the valuation date.

For reinsurance contracts held, on initial recognition, the Group measures the remaining coverage for contracts measured under the PAA at the amount of ceding premiums paid less ceding commission received from the reinsurer.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies (continued)

#### Insurance contracts (continued)

##### *Initial and subsequent measurement – group of contracts measured under the PAA (continued)*

For reinsurance contracts held, at each of the subsequent reporting dates, the remaining coverage is:

- Increased for ceding premiums paid in the period;
- Decreased for ceding commissions or investment components received in the period; and
- Decreased for the expected amounts of ceding premiums recognised as reinsurance expenses for the services received in the period.

The Group does not adjust the remaining coverage for reinsurance contracts held for the effect of the time value of money, because reinsurance premiums are due within a year of the coverage provided associated with each premium.

For groups of reinsurance contracts measured under the PAA, the Group recognises reinsurance expenses related to the premium ceded based on the pattern of the groups of underlying contracts.

The Group adjusts the remaining coverage for reinsurance contracts held for the effect of the risk of reinsurer's non-performance.

If facts and circumstances indicate that a group of insurance contracts measured under the PAA is onerous on initial recognition or becomes onerous subsequently, the Group increases the carrying amount of the LRC to the amounts of the FCF determined under the GMM with the amount of such an increase recognised in insurance service expenses, and a loss component is established for the amount of the loss recognised. Subsequently, the loss component is remeasured at each reporting date as the difference between the amounts of the FCF determined under the GMM relating to the future service and the carrying amount of the LRC without the loss component. The resulting changes in the loss component are disaggregated between insurance service expenses and insurance finance income or expenses as the option to adjust for the effect of the time value of money and financial risk in the calculation of the FCFs has been selected.

When a loss is recognised on initial recognition of an onerous group of underlying insurance contracts or on addition of onerous underlying insurance contracts to that group, the carrying amount of the asset for remaining coverage for reinsurance contracts held measured under the PAA is increased by the amount of income recognised in profit or loss and a loss recovery component is established or adjusted for the amount of income recognised. The referred income is calculated by multiplying the loss recognised on underlying insurance contracts by the percentage of claims on underlying insurance contracts that the Group expects to recover from the reinsurance contract held that are entered into before or at the same time as the loss is recognised on the underlying insurance contracts.

When underlying insurance contracts are included in the same group with insurance contracts issued that are not reinsured, the Group applies a systematic and rational method of allocation to determine the portion of losses that relates to underlying insurance contracts.

Changes in the loss recovery component are not disaggregated between income and expenses from reinsurance contracts held and reinsurance finance income or expenses for the effect of the time value of money and financial risk as the underlying loss components, which are all measured under the PAA, are not adjusted for the effect of the time value of money and financial risk.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Initial and subsequent measurement – group of contracts measured under the GMM*

###### *CSM at initial recognition*

The CSM is a component of the carrying amount of the asset or liability for a group of insurance contracts issued representing the unearned profit that the Group will recognise as it provides insurance contract services in the future.

At initial recognition, the CSM is an amount that results in no income or expenses (unless a group of contracts is onerous ) arising from:

- The initial recognition of the FCF;
- Cash flows arising from the contracts in the group at that date; and
- The derecognition of any pre-recognition cash flows.

When the above calculation results in a net outflow, the group of insurance contracts issued is onerous. A loss from onerous insurance contracts is recognised in condensed consolidated interim statement of profit or loss immediately, with no CSM recognised on the balance sheet on initial recognition, and a loss component is established in the amount of loss recognised (as per below note).

For groups of reinsurance contracts held, any net gain or loss at initial recognition is recognised as the CSM unless the net cost of purchasing reinsurance relates to past events, in which case the Group recognises the net cost immediately in profit or loss. For reinsurance contracts held, the CSM represents a deferred gain or loss that the Group will recognise as a reinsurance expense as it receives insurance contract services from the reinsurer in the future and is calculated as the sum of:

- The initial recognition of the FCF;
- Cash flows arising from the contracts in the group at that date;
- The amount derecognised at the date of initial recognition of any asset or liability previously recognised for cash flows related to the group of reinsurance contracts held (other pre-recognition cash flows); and
- Any income recognised in profit or loss when the entity recognises a loss on initial recognition of an onerous group of underlying insurance contracts or on addition of onerous underlying insurance contracts to that group.

###### *CSM at subsequent measurement*

For insurance contracts issued, at the end of each reporting period the carrying amount of the CSM is adjusted by the Group to reflect the effect of the following changes:

- The addition of CSM for new contracts recognised for the first time in the current reporting period;
- The interest accreted at the locked in yield curve on the carrying amount of the CSM;
- Changes in the FCFs relating to future service are recognised by adjusting the CSM. Changes in the FCF are recognised in the CSM to the extent that this does not result in a negative CSM. When an increase in the FCFs result in a negative CSM, the CSM is reduced to zero, the excess is recognised in insurance service expenses and a loss component is recognised within the LRC. When the CSM is zero, changes in the FCF adjust the loss component within the LRC with corresponding changes to insurance service expenses. The excess of any decrease in the FCF over the loss component reduces the loss component to zero and reinstates the CSM;

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Initial and subsequent measurement – group of contracts measured under the GMM (continued)*

##### *CSM at subsequent measurement (continued)*

- The effect of any currency exchange differences; and
- The amount recognised as insurance revenue for insurance contract services provided during the period, determined after all other adjustments above.

For insurance contracts under the GMM, the following adjustments relate to future service and thus adjust the CSM:

- a) Experience adjustments arising from premiums received in the period that relate to future service and related cash flows such as insurance acquisition cash flows (experience adjustments represents the differences between the estimate, at the beginning of the period, of amounts expected in the period and the actual payments during the period);
- b) Changes in estimates of the present value of future cash flows in the LRC, except those relating to the effect of the time value of money and the effect of financial risk and changes thereof;
- c) Differences between any investment component expected to become payable in the period and the actual investment component that becomes payable in the period, determined by comparing the actual investment component that becomes payable in a period with the payment in the period that was expected at the start of the period plus any insurance finance income or expenses related to that expected payment before it becomes payable; and
- d) Changes in the estimate of the LRC RA at the end of the period (the Group does not disaggregate these changes between insurance finance income and expenses and amounts that adjust the CSM - all changes are allocated to the latter).

Adjustments in point a and b above are measured using discount rates determined on initial recognition (the locked-in discount rates).

For reinsurance contracts held, at the end of each reporting period, the carrying amount of the CSM is adjusted by the Group to reflect the effect of the following changes:

- The addition of CSM for new contracts recognised for the first time in the current reporting period;
- Interest accreted on the carrying amount of the CSM;
- Income recognised in profit or loss when the entity recognises a loss on initial recognition of an onerous group of underlying insurance contracts or on addition of onerous underlying insurance contracts to that group. A loss recovery component is established or adjusted within the remaining coverage for reinsurance contracts held for the amount of income recognised;
- Reversals of a loss-recovery component other than changes in the FCF of reinsurance contracts held;
- Changes in the FCF, to the extent that the change relates to future service, unless the change results from a change in FCF allocated to a group of underlying insurance contracts that does not adjust the CSM for the group of underlying insurance contracts. Changes in the FCF cash flows that result from changes in the risk of non-performance by the issuer of a reinsurance contract held do not relate to future service and shall not adjust the contractual service margin;
- The effect of any currency exchange differences; and
- The amount recognised in profit or loss for insurance contract services received during the period, determined after all other adjustments above.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies (continued)

#### Insurance contracts (continued)

##### *Initial and subsequent measurement – group of contracts measured under the GMM (continued)*

##### *CSM at subsequent measurement (continued)*

The Group prepares condensed consolidated interim financial information on a quarterly basis. The Group has elected to determine cumulative results for each interim reporting period, and estimates made by the Group in previous condensed consolidated interim financial information will not be considered when applying IFRS 17 in subsequent interim periods or in the annual consolidated financial statements.

##### *Interest accretion of the CSM*

Under the GMM, interest is accreted on the CSM using discount rates determined at initial recognition of the group of contracts, i.e. the first day of the cohort, namely 1 January of the respective year that the cohort is recognised.

##### *Release of CSM to profit and loss*

The amount of the CSM recognised in profit or loss for insurance contract services in the period is determined by the allocation of the CSM remaining at the end of the reporting period over the current and remaining expected coverage period of the group of insurance contracts based on coverage units.

The coverage period is defined as a period during which the entity provides insurance contract services. Insurance contract services include coverage for an insured event (insurance coverage). The coverage period used corresponds with the term of the contracts. The total number of coverage units in a group is the quantity of service provided by the contracts in the group over the expected coverage period. The coverage units are determined at each reporting period-end prospectively by considering:

- The quantity of benefits provided by contracts in the groups;
- The expected coverage period of contracts in the group; and
- The likelihood of insured events occurring, only to the extent that they affect the expected coverage period of contracts in the group.

The Group uses the amount that it expects the policyholder to be able to validly claim in each period if an insured event occurs as the basis for the quantity of benefits with respect to insurance coverage. The Group determines coverage units as follows:

- Earned premiums for general insurance and Group Life business; and
- Outstanding loan amount for Single Premium Credit Life.

The Group reflects the time value of money in the allocation of the CSM to coverage units, using discount rates determined at initial recognition that are applied to nominal cash flows.

For reinsurance contracts held, the CSM is released to profit or loss as insurance contract services are received from the reinsurer in the period. The coverage units are defined in line with premium earning pattern for general insurance and Group Life contracts. For Single Premium Credit Life, outstanding loan amount are used.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5.1 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Initial and subsequent measurement – group of contracts measured under the GMM (continued)*

##### *Onerous contracts – loss component*

When adjustments to the CSM exceed the amount of the CSM, the group of contracts becomes onerous and the Group recognises the excess in insurance service expenses, and it records the excess as a loss component of the LRC.

When a loss component exists, the Group allocates the following between the loss component and the remaining component of the LRC for the respective group of contracts, based on the CSM allocation approach described above:

- a) Expected incurred claims and other directly attributable expenses for the period;
- b) Changes in the RA for the risk expired; and
- c) Finance income or expenses from insurance contracts issued.

The amounts of loss component allocation in point a and b above reduce the respective components of insurance revenue and are reflected in insurance service expenses.

Decreases in the FCF in subsequent periods reduce the remaining loss component and reinstate the CSM after the loss component is reduced to zero. Increases in the FCF in subsequent periods increase the loss component.

##### *Reinsurance contracts held – loss-recovery component*

A loss-recovery component is established or adjusted within the remaining coverage for reinsurance contracts held for the amount of income recognised when a loss component is set up for the group of onerous underlying insurance contracts.

This amount is calculated by multiplying the loss recognised on underlying insurance contracts by the percentage of claims on underlying insurance contracts that the Group expects to recover from the reinsurance contracts held that are entered into before or at the same time as the loss is recognised on the underlying insurance contracts. When underlying insurance contracts are included in the same group with insurance contracts issued that are not reinsured, The Group applies a systematic and rational method of allocation to determine the portion of losses that relates to underlying insurance contracts.

Subsequently, the loss recovery component is adjusted to reflect changes in the loss component of an onerous group of underlying insurance contracts. The loss recovery component is further adjusted, if required, to ensure that it does not exceed the portion of the carrying amount of the loss component of the onerous group of underlying insurance contracts that the Group expects to recover from the group of reinsurance contracts held.

The loss-recovery component of the Group was not affected by changes in the risk of reinsurers' non-performance.

The loss-recovery component determines the amounts that are presented as a reduction of incurred claims recovery from reinsurance contracts held and are consequently excluded from the reinsurance expenses determination.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Amounts recognised in comprehensive income*

##### *Insurance revenue*

For contracts not measured under the PAA, insurance revenue comprises the following:

- Insurance claims and expenses incurred in the period as expected at the start of the period, excluding amounts related to the loss component, repayments of investment components and insurance acquisition expenses;
- Changes in the RA, excluding changes that relate to future coverage which adjusts the CSM and amounts allocated to the loss component;
- Amounts of the CSM recognised in profit and loss for the services provided in the period;
- Actual vs expected premiums (or other premium-related cash flows such as commission) that relate to past or current services; and
- The recovery of the insurance acquisition cash flows which is determined by allocating a portion of the premiums related to the recovery of these cashflows on the basis of the passage of time over the expected coverage of a group of contracts.

For groups of insurance contracts measured under the PAA, the Group recognises insurance revenue based on the passage of time over the coverage period of a group of contracts with the exception of Engineering (all risk) and Construction (all risk) contracts where revenue is recognised using an increasing risk pattern and Marine Cargo where it is assumed that 25% of premium is unearned at the valuation date.

##### *Insurance service expenses*

Insurance service expenses include the following:

- Claims incurred in the period (excluding investment components) and other directly attributable insurance service expenses incurred in the period;
- The amortisation of insurance acquisition cash flows;
- Changes that relate to past service (specifically changes in the estimate of the LIC at the start of the period including the change in the RA on the LIC); and
- Losses on onerous groups of contracts (i.e. the loss on setting up a loss component) and reversals of such losses which represent changes that relate to future service.

For contracts not measured under the PAA, amortisation of insurance acquisition cash flows is reflected in insurance service expenses in the same amount as insurance acquisition cash flows recovery reflected within insurance revenue, as described above.

For contracts measured under the PAA, amortisation of insurance acquisition cash flows is based on the pattern of revenue recognition under the PAA.

Other expenses not meeting the above categories are included in other operating expenses in the condensed consolidated interim statement of profit or loss.

##### *Net income (expenses) from reinsurance contracts held*

The Group presents the income from reinsurance contracts held and the expenses for reinsurance contracts held separately.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Amounts recognised in comprehensive income (continued)*

Reinsurance income will consist of:

- Actual claims and other expenses recovered during the period;
- The effect of changes in the risk of reinsurers non-performance;
- Losses recovered on underlying contracts and reversal of such recoveries;
- Changes that relate to past service adjustments to incurred claims component; and
- Other incurred directly attributable expenses.

For contracts measured under the PAA, reinsurance expenses will consist of:

- PAA premiums recognised as revenue in the period ceded to the reinsurer; and
- Ceding commission earned in the period.

For contracts measured under the GMM, reinsurance expenses will consist of:

- Expected claims and other expenses recovery;
- Changes in the RA recognised for the risk expired;
- CSM recognised for the services received; and
- Premium (and other related cash flows) experience adjustments relating to current service.

##### *Insurance finance income or expenses*

Insurance finance income or expenses comprise the change in the carrying amount of the group of insurance contracts arising from:

- Interest accreted on the CSM;
- Interest accreted on the PAA LRC excluding the LC (if adjusted for the financing effect);
- The financing effect on the LC measured under the PAA (if adjusted for the financing effect);
- The effect of changes in FCFs at current rates, when the corresponding CSM unlocking is measured at the locked-in rates;
- Any interest charged to or added to insurance / reinsurance asset or liability balances; and
- The effect of changes in interest rates and other financial assumptions.

For all groups of contracts, the Group disaggregates insurance finance income or expenses for the period between profit or loss and other comprehensive income (that is, the OCI option is applied). The finance income and expenses from insurance contracts issued recognised in the condensed consolidated interim statement of profit or loss reflects the unwind of the liabilities at the locked-in rates. The remaining amount of finance income and expenses from insurance contracts issued for the period is recognised in OCI.

##### *Transition*

The Group has applied IFRS 17 from financial reporting periods commencing on 1 January 2023 with the date of transition from IFRS 4 being 1 January 2022.

The Group has adopted IFRS 17 retrospectively. The full retrospective approach was applied to the insurance contracts in force at the transition date.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Estimates and assumptions*

##### *Best estimate cash flows*

The best estimate liability (BEL) represents the explicit, unbiased and probability weighted best estimate (expected value) of the future cash outflows minus the future cash inflows that arise when the Group fulfils its obligations with respect to the insurance contracts. The BEL, thus include the effects of discounting, allowing for financial risks (to the extent not included in the estimate of the cash flows).

Cash flows are within the contract boundary if they arise from substantive rights and obligations that exist during the period in which the Group:

- Can compel the policyholder to pay the premium; or
- Has a substantive obligation to provide the policyholder with coverage or other services.

A substantive obligation to provide services ends when the Group has the ‘practical ability’ to reassess the risks and can set a price or level of benefits that fully reflects those reassessed risks.

Before a group of insurance contracts is recognised, the Group could recognise assets or liabilities for cash flows related to a group of insurance contracts other than insurance acquisition cash flows, either because of the occurrence of the cash flows or because of the requirements of another IFRS standard. Cash flows are related to the group of insurance contracts if they would have been included in the FCF at initial recognition of the group if they had been paid or received after that date. Such assets or liabilities (referred to as ‘other pre-recognition cash flows’) are included in the carrying amount of the related portfolios of insurance contracts issued or in the carrying amount of the portfolios of reinsurance contracts held.

The Group estimates which cash flows are expected and the probability that they will occur as at the measurement date. In making these expectations, the Group applies the following principles:

- Where there is sufficient data, experience investigations are performed, with adjustments made for any trends as well as to account for external considerations and business strategy; or
- Where data is insufficient or lacks credibility, benchmarks and industry experience would be considered, with appropriate and justifiable adjustments.

The Group makes use of estimates that are current by ensuring that:

- Updates are made to assumptions such that they faithfully represent the conditions at the valuation date;
- The changes in estimates faithfully represent the changes in conditions during the period; and
- Future changes in legislation are not taken into account, unless they have been substantively enacted.

The Group makes use of the following assumptions to project the cash flows for the non-life and group life business where required:

- Expected premium receipts pattern;
- Expected claims ratio;
- Expected attributable expense ratio;
- Expected bad debt;
- Expected incidence of risk; and
- Expected claims payment pattern.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Estimates and assumptions (continued)*

##### *Best estimate cash flows (continued)*

The Group makes use of the following assumptions to project the cash flows for the life business:

- Expected premium receipts pattern;
- Mortality / morbidity rates;
- Persistency; and
- Expenses.

For the measurement of the LIC, the Group uses a blended approach (i.e. the chain-ladder, Bornhuetter Ferguson and expected loss ratio techniques are used) for calculating the Incurred But Not Reported Reserves (IBNR) and Incurred But Not Enough Reserves (IBNER) for all direct lines of business. The Group performs the calculations using quarterly claims development for all portfolios except Motor and Medical where monthly claims development is used.

The calculations are performed using incurred claims except for the Medical business where the calculations are performed using paid claims. Incurred claims are set as paid claims plus the outstanding claims reserve. The outstanding claims reserves are set in line with the case estimates that are determined when a claim is reported.

For the measurement of the inwards reinsurance LIC, the Group uses the expected loss ratio method given the small size of this portfolio.

Expenses related directly to the settlement of the claim are implicitly included in the claims estimates described above. Other overhead expenses deemed attributable to the settlement of the claim are determined using the Kittel method.

Future cash flows are adjusted for the time value of money as most claims take more than a year to be settled by the Group.

The approach used to accurately allow for non-performance would be to model the loss to be suffered on a default event and the probability of such an event occurring. Mathematically this could be expressed as:

Probability of default (“PD”) x Loss given default (“LGD”) x Exposure at default (“EAD”)

Assumptions for PDs and LGDs should be set using market data at the valuation date.

The Group uses a range of macro-economic factors, forward-looking estimates and credit behavior of the reinsurer in the assessment of risk of reinsurers’ non-performance. The Group periodically reviews and updates selected economic series and applies judgement in determining what constitutes reasonable and forward-looking estimates.

##### *Discount rates*

The bottom-up approach was used to derive the discount rate for all contracts within the scope of IFRS 17. Under this approach, the discount rate is determined as the risk-free yield, adjusted for differences in liquidity characteristics between the financial assets used to derive the risk-free yield and the relevant liability cash flows (known as an ‘illiquidity premium’). The risk-free rate was derived using the Abu Dhabi Sovereign Bonds Yield Curves.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies (continued)

#### Insurance contracts (continued)

##### Estimates and assumptions (continued)

##### Discount rates (continued)

Management uses judgement to assess liquidity characteristics of the liability cash flows. It was determined that all contracts are considered less liquid than the financial assets used to derive the risk-free yield. For all contracts, the illiquidity premium was estimated based on market observable liquidity premiums in financial assets, adjusted to reflect the illiquidity characteristics of the liability cash flows.

Where the Group is exposed to FCFs that vary with inflation (e.g. claims and expense cash flows), the Group has explicitly allowed for inflation in the FCFs measurement and has discounted these using nominal discount rates set using the bottom-up approach.

The yield curves that were used to discount the estimates of future cash flows are as follows:

Financial period	1 Year	5 Year	10 Year	20 year	30 Year
30 June 2023	5.88%	4.46%	4.41%	4.82%	4.93%
31 December 2022	5.21%	4.47 %	4.36 %	4.62 %	4.45 %

##### Risk adjustment for non-financial risk

The risk adjustment for non-financial risk is applied to the present value of the estimated future cash flows, and it reflects the compensation that the Group requires for bearing the uncertainty about the amount and timing of the cash flows from non-financial risk as the Group fulfils insurance contracts.

The Group has used the Value at Risk (VAR) approach to determine the RA for all contracts except the single premium credit life contracts where provisions for adverse deviation has been used. The Group allows for all non-financial risks related to the insurance contract when calculating the RA.

For the VAR approach, the Group has used the Mack method to determine the RA for the LIC at the chosen confidence level. The distributions used in the method were selected based on a goodness of fit test. The RA for the LRC was estimated by scaling the calculation for the CBUAE premium risk module to the selected confidence level.

For single premium credit life, the margins used in the methodology were calibrated to be in line with the Group's selected confidence level.

Because the risk adjustment represents compensation for uncertainty, estimates are made on the degree of diversification benefits and expected favorable and unfavorable outcomes in a way that reflects the Group's degree of risk aversion. These estimates are made based on the expected diversification across all of the Group's insurance contracts.

The risk adjustment for the Motor, Medical and Property portfolio corresponds to a 60% confidence level whereas the risk adjustment for all other lines of business correspond to a 70% confidence level.

The Group does not disaggregate changes in the RA between insurance service result and insurance finance income or expenses.

The Group has used consistent approach to calculate the RA as for the insurance contracts.

## Notes to the condensed consolidated interim financial information

### 5 Changes in significant accounting policies *(continued)*

#### Insurance contracts *(continued)*

##### *Transition*

Changes in accounting policies resulting from the adoption of IFRS 17 have been applied using a full retrospective approach to the extent practicable. Under the full retrospective approach, at 1 January 2022 the Group:

- identified, recognised and measured each group of insurance and reinsurance contracts as if IFRS 17 had always been applied;
- identified, recognised and measured any assets for insurance acquisition cash flows as if IFRS 17 had always been applied;
- derecognised previously reported balances that would not have existed if IFRS 17 had always been applied. These included some deferred acquisition costs for insurance contracts, intangible assets related to insurance contracts (previously referred to as ‘value of business acquired’), insurance receivables and payables, and provisions for levies that are attributable to existing insurance contracts. Under IFRS 17, they are included in the measurement of the insurance contracts; and
- recognised any resulting net difference in equity.

The Group has applied the transition provisions in IFRS 17 and has not disclosed the impact of the adoption of IFRS 17 on each financial statement line item and EPS. The effects of adopting IFRS 17 on the consolidated interim financial informations at 1 January 2022 are presented in the statement of changes in equity.

## Notes to the condensed consolidated interim financial information

### 13 Related parties (*Unaudited*) (*continued*)

At the Annual General Assembly held on 21 March 2023, the shareholders approved Board of Directors' remuneration relating to the results for the year ended 31 December 2022 amounting to AED 5,800 thousand (*31 December 2022: AED 5,800 thousand relating to the results for the year ended 31 December 2021*).

*Compensation of key management personnel is as follows:*

	Three-month period ended		Six-month period ended	
	30 June		30 June	
	2023	2022	2023	2022
	AED'000	AED'000	AED'000	AED'000
Salaries and short-term benefits	3,427	3,460	11,990	11,595
Employees' end of service benefits	245	119	570	345
	<u>3,672</u>	<u>3,579</u>	<u>12,560</u>	<u>11,940</u>

### 14 Fair value of financial instruments (*Unaudited*)

A number of the Group's accounting policies and disclosures require the measurement of fair values, for both financial and non-financial assets and liabilities.

IFRS 13 establishes a single framework for measuring fair value and making disclosures about fair value measurements when such measurements are required or permitted by other IFRS. It unifies the definition of fair value as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

Management regularly reviews significant unobservable inputs and valuation adjustments. If third party information, such as broker quotes or pricing services, is used to measure fair values, then the management assesses the evidence obtained from the third parties to support the conclusion that such valuations meet the requirements of IFRS, including the level in the fair value hierarchy in which such valuations should be classified.

When measuring the fair value of an asset or a liability, the Group uses market observable data as far as possible. Fair values are categorised into different levels in a fair value hierarchy based on the inputs used in the valuation techniques as follows:

- Level 1: quoted prices (unadjusted) in active markets for identical assets or liabilities.
- Level 2: inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices).
- Level 3: inputs for the asset or liability that are not based on observable market data (unobservable inputs).

If the inputs used to measure the fair value of an asset or a liability might be categorised in the different levels of the fair value hierarchy, then the fair value measurement is categorised in its entirety in the same level of the fair value hierarchy as the lowest level input that is significant to the entire measurement.

The Group recognises transfers between levels of the fair value hierarchy at the end of the reporting period during which the change has occurred.

# Abu Dhabi National Insurance Company PJSC and its subsidiary

## Notes to the condensed consolidated interim financial information

### 14 Fair value of financial instruments (Unaudited) (continued)

#### *Assets measured at fair value – fair value hierarchy*

The table below analyses assets at fair value at the end of the reporting period, by the level in the fair value hierarchy into which the fair value measurement is categorised:

	Level 1 AED'000	Level 2 AED'000	Level 3 AED'000	Total AED'000
<b>30 June 2023</b>				
Financial assets at fair value through profit or loss	95,270	-	289,455	384,725
Financial assets at fair value through other comprehensive income	1,360,084	17,063	144,029	1,521,176
	<u>1,455,354</u>	<u>17,063</u>	<u>433,484</u>	<u>1,905,901</u>
	Level 1 AED'000	Level 2 AED'000	Level 3 AED'000	Total AED'000
<i>31 December 2022</i>				
Financial assets at fair value through profit or loss	139,440	-	268,233	407,673
Financial assets at fair value through other comprehensive income	1,426,115	17,017	151,715	1,594,847
	<u>1,565,555</u>	<u>17,017</u>	<u>419,948</u>	<u>2,002,520</u>

The valuation techniques and inputs used in this condensed consolidated interim financial information are consistent with those described in the Group's last annual consolidated financial statements for the year ended 31 December 2022.

#### *Fair value of financial instruments measured at amortised cost*

Except as detailed in the following table, management considers that the carrying amounts of financial assets and financial liabilities recognised in the condensed consolidated interim statement of financial position approximate their fair values.

	Carrying amount AED'000	Fair value AED'000
<b>30 June 2023</b>		
Financial assets at amortised cost	<u>1,035,258</u>	<u>971,162</u>
<i>31 December 2022</i>		
Financial assets at amortised cost	<u>961,658</u>	<u>894,539</u>

# Abu Dhabi National Insurance Company PJSC and its subsidiary

### 18 Capital risk management (*Unaudited*)

The solvency regulations identify the required solvency margins to be held in addition to insurance liabilities. The solvency margins (presented in the table below) must be maintained at all times throughout the year. The Group is subject to solvency regulations which it has complied with during the period. The Group has incorporated in its policies and procedures the necessary tests to ensure continuous and full compliance with such regulations.

The table below summarises the Minimum Capital Requirement, Minimum Guarantee Fund and Solvency Capital Requirement of the Group and the total capital held to meet these required Solvency Margins as defined in the regulations. In accordance with Circular No. CBUAE/BSN/2022/923 of CBUAE dated 28 February 2022, the Group has disclosed the solvency position for the immediately preceding period as the current period solvency position is not finalised.

	<b>31 March 2023 AED'000</b>	31 December 2022 AED'000
Total capital held by the Group	<b>570,000</b>	570,000
Minimum regulatory capital for an insurance company	<b>100,000</b>	100,000
Minimum Capital Requirement (MCR)	<b>100,000</b>	100,000
Solvency Capital Requirement (SCR)	<b>1,141,787</b>	1,061,695
Minimum Guarantee Fund (MGF)	<b>540,257</b>	492,471
<i>Own funds</i>		
Basic own funds	<b>2,007,025</b>	2,301,504
Own funds eligible to meet MCR, SCR, MGF	<b>2,007,025</b>	2,301,504
MCR solvency margin - (surplus)	<b>1,907,025</b>	2,201,504
SCR solvency margin - (surplus)	<b>865,238</b>	1,239,809
MGF solvency margin - (surplus)	<b>1,466,769</b>	1,809,033

### 19 Corporate tax

On 9 December 2022, the UAE Ministry of Finance released the Federal Decree Law No. 47 of 2022 on the Taxation of Corporations and Businesses (the Law) to enact a Federal Corporate Tax (CT) regime in the UAE. The CT regime will become effective for accounting periods beginning on or after 1 June 2023.

The Cabinet of Ministers Decision No. 116/2022 effective from 2023, specifies the threshold of income over which the 9% tax rate would apply and accordingly, the Law is now considered to be substantively enacted. A rate of 9% will apply to taxable income exceeding AED 375,000, a rate of 0% will apply to taxable income not exceeding AED 375,000. The Company has assessed the possible impact on the condensed consolidated interim financial information and concluded that the results for the six-month period ended 30 June 2023 are not impacted by the transition requirements.

### 20 General

The condensed consolidated interim financial information of the Group was approved for issuance by the Board of Directors on 10 August 2023.
